

**Last Updated 4.28.22**

Senate Bill 291, which went into effect 1.1.22 created an “advanced esthetic” license. The scope of practice for an advanced esthetician includes nonablative esthetic medical procedures.

Nonablative esthetic medical procedures are services that are not expected to excise, vaporize, disintegrate or remove living tissue. All nonablative procedures require the supervision of a healthcare professional (Physician, Physician’s Assistant or Advanced Practice Registered Nurse).

The chart below breaks down some of the most common services for an esthetician and an advanced esthetician and also outlines prohibited/ out-of-scope services. An esthetician’s scope of practice has not changed with the addition of advanced esthetics as a new license type. Select gray-area services that had previously been unregulated are now part of the scope of practice of an advanced esthetician.

This list has been provided to you by the Board for informational purposes. ***The list is a living document and as such is subject to change. New services and information will be added regularly so please check back.***

The services listed below are not a full and exhaustive list of all services in each category.

If you wish to inquire about a specific service or device, you will need to provide the Board with the device name, manufacturer’s name, product code/number, device class, regulation number and any other pertinent information. Inquiries may be directed to [info@nvcosmo.com](mailto:info@nvcosmo.com).
